3-phase
50Hz

Sewage pump with vortex impeller

The UT pump features a vortex (eddy flow) structure and wide pump casing interior, preventing clogging by waste and solid matter.

Vortex Impeller

This impeller is used mainly to avoid clogging or wear by large or stringy solids in the water. It accelerates part of the water to great speed, and this speed is used to smoothly move all the water from inlet to outlet.

Optional Accessories:

- TOK4-A guide rail fitting for small pumps:
 - Guide support / Guide hook
 - Duck foot bend
 - Lifting chain
